

Installation and User Guide

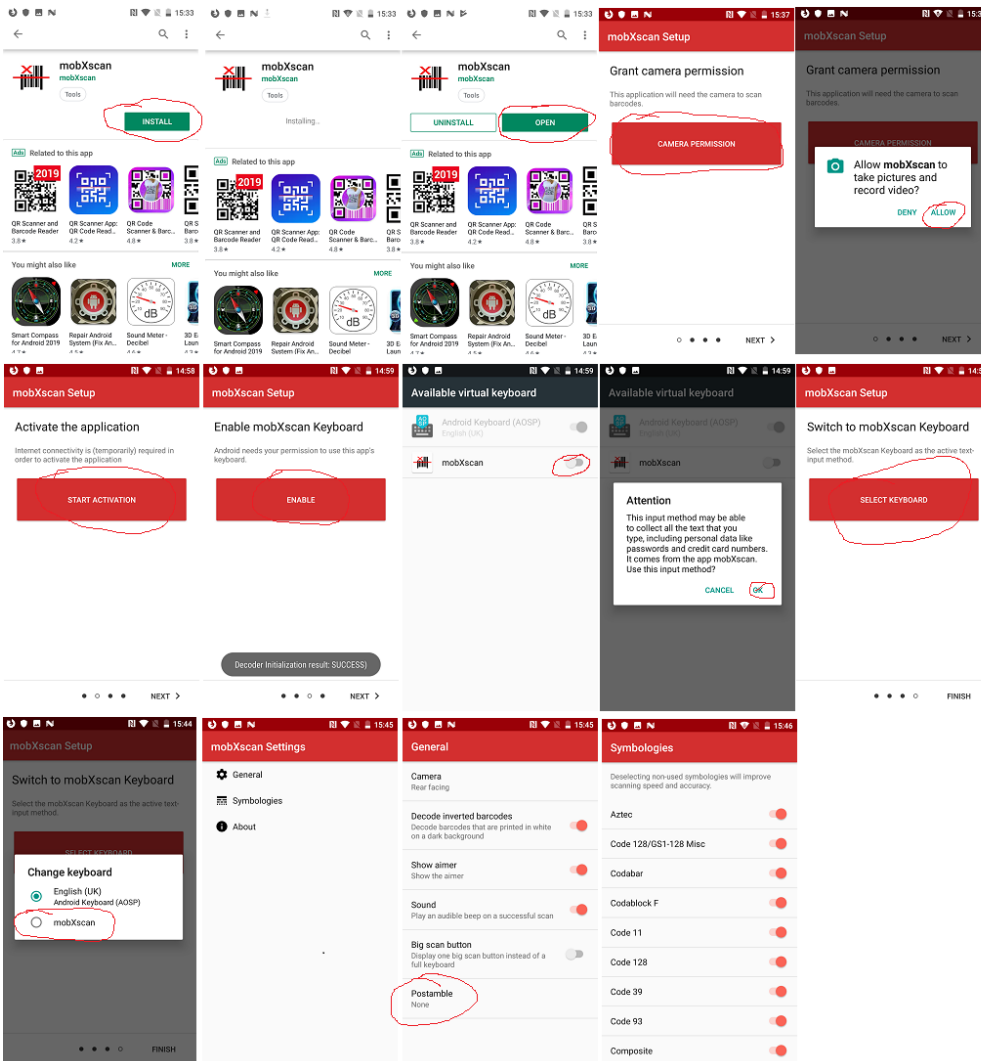

mobXscan Android is a powerful Barcode Scanning utility for any Android device—Phone, Tablet, EPOS, etc.

Simple to install and use it provides industry leading reading performance and is configurable to be controlled manually or from an external programme, and can output data to a keyboard or to another application utilising the simple to use API supplied.

To download and install mobXscan Android visit www.mobxscan.com/download

Direct install of trial version from Playstore <http://bit.do/eKbhT>

Click Install. When finished follow these screens to enable. The final screenshot shows the setup page for mobXscan.

In General settings you can define a character to transmit after the code and other attributes.

The Symbologies settings allows different barcode types to be enabled or disabled. When complete just close.

The first time the Barcode Reader is triggered permission is requested to take pictures and record video.

Operation of mobXscan has been designed for simplicity. The device operates with mobXscan as a keyboard. So any app that needs data input can be sent text with keyboard, or Barcode data with mobXscan keyboard.

You can toggle between Keyboard and Barcode keyboard window. Just go to the field that needs Barcode data and click on it to open keyboard, then toggle between normal text keyboard and mobXscan barcode keyboard.
